Professional Summary

DevOps / Cloud Engineer with hands-on experience designing, deploying, and automating cloud-native systems on AWS. Strong practical exposure to CI/CD, Kubernetes, Infrastructure as Code, and observability through production-like projects and internship work. Actively seeking Junior DevOps / Cloud Engineer roles.

Core Skills

AWS (EC2, EKS, S3, VPC, IAM, CloudFront), Docker, Kubernetes, Helm, Jenkins, ArgoCD, Git, Terraform, Ansible, Prometheus, Grafana, Loki, Zabbix, Nginx, IIS, Cloudflare, Python, Groovy, SQL, YAML, HCL, Linux, VS Code, Xcode, Apple CoreML.

Experience

DevOps Engineer

Dec 2025 – Present

AlMuqet Systems, Srinagar, India

- Designed and managed CI/CD pipelines across multiple production projects, streamlining build, test, and deployment workflows end-to-end.
- Deployed comprehensive monitoring and observability infrastructure using Zabbix, enabling proactive alerting and dramatically reducing MTTR.
- Collaborated with development teams to ensure reliable, automated software delivery with minimal downtime.

DevOps Intern

Aug 2025 – Dec 2025

iQuasar Software Solutions, Srinagar, India

- Built and maintained CI/CD pipelines using Jenkins and GitHub, reducing manual deployment effort and improving deployment speed by approximately 30% in test environments.
- Containerized applications using Docker and deployed them on Kubernetes clusters for scalable app deployments.
- Provisioned and managed cloud infrastructure using Terraform and Ansible, ensuring reproducible and version-controlled environments.
- Implemented monitoring and logging using Prometheus, Grafana, and Loki to improve system visibility and troubleshooting efficiency.

Projects

Automated CI/CD Deployment of a 3-Tier Chat Application (AWS, EKS)

github.com/thebbear7/full-stack-chatApp [↗](#)

- Designed and provisioned AWS infrastructure using Terraform, including VPC, subnets, security groups, and an EKS cluster for scalable and secure deployments.
- Built and containerized frontend and backend microservices with Docker, deployed them on Kubernetes, and automated image management via Jenkins pipelines integrated with DockerHub.
- Implemented end-to-end CI/CD by configuring a GitHub webhook to trigger Jenkins on every code push, enabling fully automated builds and deployments to the EKS cluster.

Kubernetes Notes Application Deployment with Observability

github.com/thebbear7/notes-app [↗](#)

- Deployed a three-tier React Native–Node.js–MongoDB notes application on a Minikube cluster hosted on EC2.
- Wrote Dockerfiles and Kubernetes manifests to manage application services and scaling.
- Integrated Prometheus, Grafana, and Loki for cluster monitoring, metrics visualization, and centralized logging.

CloudFront-Based Image Delivery Optimization

- Optimized image delivery by comparing AWS CloudFront against direct S3 access, hosting 50 MB images across *us-east-1*, *eu-west-2*, and *ap-southeast-1*.
- Measured load times from Srinagar: S3 (33s, 26s, 21s) vs. CloudFront (Mumbai edge: 5s), achieving a 5–6× performance improvement through CDN caching.

Education

University of Kashmir

Dec 2020 – Oct 2024

BTech in Electronics and Communications

Certifications

AWS Cloud Practitioner - Amazon Web Services

February 2025
